

Conservation Results for 14 Projects

1990 The Barrier Island of Schiermonnikoog, The Netherlands

Partners: World Wildlife Fund (WWF) and Nature Monuments of the Netherlands **Problem:** Conflict between modern agricultural practices and nature conservation; lack

of protected status

Results: A year after the project, exhibition and book publication and with the endorsement

of Prince Bernhard of the Netherlands (co-founder of WWF) two-thirds of the island was declared a National Park in which cars are no longer allowed.

Book: Wind, Wad en Waterverf (Wind, Wadden Sea and Watercolor) In Dutch only

1992 Biebrza Marshes, Poland.

Partner: World Wildlife Fund International

Problem: Absence of protected status for these globally significant riverine wetlands resulting

in illegal timbering, poaching and water pollution.

Results: Following the ANF project and numerous international exhibitions, the Biebrza and

Narev Marshes National Park was established. Ysbrand Brouwers, founder and President of ANF, was invited to join Prince Bernhard to take part in the park's

opening ceremonies in 1994.

Book: *Portrait of a Living Marsh* (In English and Dutch)

1995 Loire River Estuary, France Partners: WWF France and BirdLife France

Problem: Pollution of the estuary by industrial development and shipyards, threatening vital

feeding and resting habitat for millions of migrating shorebirds in spring and fall.

Results: Increased cooperation between local industry and conservation organizations

resulting in abatement of pollution and significant clean-up of the estuary

Book: *Pour une Loire Vivant / That the Loire May Live* (bilingual)

1996 Wexford Coast, Ireland

Partners: BirdLife Ireland

Problem: Absence of protected areas along the east coast, resulting in significant declines of

colonial and migratory water and sea related birds and other wildlife due to human

disturbance.

Results: ANF project enabled BirdLife to promote the ecological value of coastal habitats

resulting in protected status for a number of beaches and bays.

Products: Exhibition, catalogue and newspaper articles.

1996-97 Copper River Delta, Alaska, USA
Partner: Clean Water Alliance, Cordova Alaska

Problem: Environmental pollution of a vast amount of critical habitat as the result of

The Exon Valdez oil spill.

Results: Local activists achieved national prominence when they gave copies of the

resulting ANF book with a foreword by Jimmy Carter to every member of congress together with an invitation to visit. Since then, threats to oil and gas drilling in the Delta have ceased. However President Trump wants to begin extraction, and a

reissue of the ANF book is under consideration.

Book: Alaska's Copper River Delta

1998 Bandhavgarh National Park, India

Partners: Glasgow Museums and Galleries and 21st Century Tiger Foundation

Problem: Significant decline of the tiger population due to development and resulting

destruction of habitat.

Results: 21st Century Tiger Foundation used the ANF project as a flagship for a

International campaign and fundraising for Tiger conservation. An Exhibition in Glasgow attracted 400,000+ visitors, and an environmental education program was developed in the Bandhavgarh school system.

Since our project, Tiger conservation is much higher now on the international and

national agenda (India)

Serious efforts to create and protect corridors between the different protected areas

and National Parks

Book: Tigers

2001 Catalan Pyrenees, Spain

Partners: Fundació Territori i Paisatge and Caixa de Catalonia

Problem: Destruction of old growth forest due to the development of ski resorts.

Results: Development of ski runs has been halted, and the remaining old growth forest

now has official protected status.

Book: *Mature Forests* (In French, Spanish, Catalan and English) **Film:** Documentary of the ANF project by filmmaker Richard Kemp.

2002 Algarve, Portugal

Partners: Quinta do Lago and SPEA, Sociedade Portuguesa o Estudo das Aves (Portuguese

Society for the Protection of Birds), BirdLife Portugal.

Problem: Uncontrolled development of golf courses and other tourism facilities, threatening

important bird habitat.

Results: Much improved cooperation between the partners. Reduced use of pesticides on

the golf courses. Hides were built for birdwatchers (and golfers), and

information panels were installed. Protected areas now have better monitoring

and enforcement.

Book: Living Paintings (*Quadros de Vida*) (bilingual)

2003 Tumbesian Dry Forest of Peru and Ecuador

Partners: Bosques sin Fronteras (Peru & Ecuador) and WWF the Netherlands

Problem: 70% of all species in this isolated dry forest are endemic (exist nowhere else),

yet only 10% of the original forest remains due to uncontrolled logging and the

absence of any protected status.

Results: The governor of the state in Peru where the project took place was so

impressed, that he halted all "nature-unfriendly" activities. The remains of the dry

forest on both sides of the border are now totally protected.

Book: Treasures of the Forgotten Forest (Bosques sin Fronteras) 2 different books

Film: Documentary of the ANF project by filmmaker Richard Kemp.

2004-05 The Great Fen, Cambridgeshire, England

Partners: English Nature and The Wildlife Trust

Problem: This once extensive wetland, harboring rare birds such as Eurasian Bittern,

European Crane and Osprey was drained by the Dutch by the end of the 17th century. Since then, the soils have become degraded by agricultural development

causing further loss of species.

Results: Following the ANF project, 75% of the habitat has been purchased from local

farmers and a restoration project is proceeding (ahead of schedule!). The book played a major role in inspiring the national lottery fund to contribute £11million

to the project and in winning the support of Prince Charles.

Book: The Great Fen (Artists for Nature in England)

2005-06 Windmills in the Dutch province of Utrecht

Partners: Foundation 'Het Utrechts Landschap'

Problem: On-going pauperizing of the valuable old windmills often situated in rural and

beautiful settings in the province of Utrecht because of lack of money and

therefor lack of maintenance.

Results: Project, Book and Exhibition has helped to get subsidies from the local

government and raise funds from foundations and private people. All

windmills have been restored by now!

Book: Sails, Wind and Meadow Birds. Wieken Wind en Watervogels

2008-09 Hula Valley, Israel

Partner: Society for the Protection of Nature in Israel (SPNI)

Problem: Intrusion of semi-illegal agriculture and fish farming into former conservation land

of vital importance to tens of thousands of migrating cranes and other birds.

Results: Agreements were reached with the farmers to minimize impact on wildlife

by using fewer pesticides against rodents. Hundreds of nest boxes have been

erected for kestrels and Barn Owls to reduce rodent populations.

Book: *Drawing Inspiration from the Hula Valley (Artists for Nature in Israel).*

In Hebrew and Arabic as well as English (3 languages in one book).

- Artists for Nature Foundation

2011 Isle of Sark

Partners: Chief Please (Sark's Government) and The Sark Community

Problem: No formal laws currently exists to protect the native vegetation and wildlife of this

smallest of UK's Channel Islands. One of the island's special features is that its Night sky is nearly free of light pollution. Its character is now under threat from

non-traditional development.

Results: Following the ANF project and resulting exhibitions on the other Channel Islands

and in the Netherlands, Sark was officially designated as the world's first Dark Sky Island, and proceeds from the sale of artworks were donated to the Sark Community for use in conservation projects and for environmental education in Sark schools.

Book: For the Love of Sark

Film: Documentary of the ANF project with same name as the book by Hans Rademakers.

2017 Dead Sea, Israel and Jordan

Partners: SPNI, (Society for the protection of Nature in Israel) The Hoopoe Foundation,

Amman Centre for Peace and Development, The Ministry of Regional

Cooperation and 4 others!

Problem: The Dead Sea is the lowest body of water on the planet, and its level is currently

dropping by a meter or more each year; at this rate it will be completely dry within

20 years.

Results: Unknown so far, but in August 2018, the ANF book was presented at the

International Ornithological Congress in Vancouver, British Colombia, Canada. <u>Finally some good news from Israel!</u> To show that conservationists from Israel, Jordan and Palestine do work together with the same goal: to protect the birds.

"Birds don't know boundaries or war"!

Book: *Bringing the Dead Sea to Life – Art and Nature at the Lowest Place on Earth* (In

English, Hebrew and Arabic, 3 languages in one book
